Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. First strand cDNA was primed with a primer [5, GARAGARGATCCAAKAGCTCTTTTTTTTTTTTTTTTTYN 3, CDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. cDNA went through one round of normalization to Rot = 5.0 and subtraction to Rot = 20.0. Second strand cDNA was prepared with the primer adapter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Konno, H., Akiyama, J., Nishi, K., Kitsunai, T., Tashiro, H., Itoh, M., Sumi, N., Ishii, Y., Nakamura, S., Hazama, M., Nishine, T., Harada, A., Yamamoto, R., Matsumoto, H., Sakaguchi, S., Ikegami, T., Kashiwagi, K., Fujiwake, S., Inoue, K., Togawa, Y., Izawa, M., Ohara, E., Watahiki, M., Yoneda, Y., Ishikawa, T., Ozawa, K., Tanaka, T., Matsuura, S., Kawai, J., Okazaki, Y., Muramatsu, M., Inoue, Y., Kira, A. and Hayashizaki, Y.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                             759

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The BCL-X-like polynucleotides are useful in therapeutic, diagnostic and pharmacogenic applications. They are useful for screening drugs effective in the treatment of symptomatic or phenotypic manifestations perturbing the normal function of protein in the body and also for treating physiological disorders and diseases. The BCL-X-like polynucleotides are useful in conjunction with polymerase chain reaction to screen libraries, isolate clones, to prepare cloning and sequencing templates and as hybridisation probes for assessing gene expression patterns.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure;

They are useful for screening drugs effective in the treatment of symptomatic or phenotypic manifestations perturbing the normal function of protein in the body and also for treating physiological disorders and diseases. The BCL-X-like polynucleotides are useful in conjunction with polymerase chain reaction to screen libraries, isolate clones, to prepare cloning and sequencing templates and as hybridisation probes for assessing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel isolated human BCL-X-like polynucleotide, diagnostic and pharmacogenic applications

Novel polynucleotide encoding Bc1-G polypeptide, apoptosis, and for diagnosing and treating cancer polypeptide, useful for modulating

specific antibodies are useful for diagnosing cancer, monitoring cancer therapy or assessing prognosis of patients with cancer. The Bcl-G polypeptides are useful for modulating the activity of an oncogenic polypeptide. They are useful for identifying modulators, for modulating a level of apoptosis mediated by the Bcl-G polypeptide. A therapeutic composition comprising the Bcl-G polypeptide, polynucleotide or antibody is useful for treating a pathology characterized by abnormal cell proliferation especially cancer. The present sequence represents a cDNA ancoding a Bcl-Cs polypeptide. The invention relates to Bcl-G The Bcl-G a Bcl-Gs n relates to Bcl-G polypeptides and nucleic acids encoding l-G polypeptides can be expressed by standard recombinant Bcl-G oligonucleotides (or its anti-sense strand) and Bcl-G polypeptide. acids encoding antibody

The BCL-X-like polynucleotides are useful in therapeutic, diagnostic and pharmacogenic applications. They are useful for screening drugs effective in the treatment of symptomatic or phenotypic manifestations perturbing the normal function of protein in the body and also for treating physiological disorders and diseases. The BCL-X-like polynucleotides are useful in conjunction with polymerase chain reaction to screen libraries, isolate clones, to prepare cloning

The Bcl-G polypeptides can be expressed by standard recombinant methodology. Bcl-G oligonucleotides (or its anti-sense strand) and Bcl-G specific antibodies are useful for diagnosing cancer, monitoring cancer therapy or assessing prognosis of patients with cancer. The Bcl-G polypeptides are useful for modulating the activity of an oncogenic polypeptide. They are useful for identifying modulators, for modulating a level of apoptosis mediated by the Bcl-G polypeptide. A therapeutic composition comprising the Bcl-G polypeptide, polynucleotide or antibody is useful for treating a pathology characterized by abnormal cell proliferation especially cancer. The present sequence represents a cDNA encoding a Bcl-Gl polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 1179 BP; 340 A; 285 C;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel polynucleotide encoding Bc1-G polypeptide, useful for modulating apoptosis, and for diagnosing and treating cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       436
                                                                                                                                                                                                                                                                                                   676

                                                                                                                             (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromo and gene mapping, and in recombinant production of (II). The
                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                     polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                31-MAR-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   30-MAR-2001; 2001WO-US08631
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; chromosome mapping; gene mapping; gene therapy;

                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             derived from mRNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias than expressed sequence tag microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence is a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                           ches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New spatially-addressable set of single exon nucleic acid posseful for measuring gene expression in sample derived from breast, comprises number of single exon nucleic acid probes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 nucleic acid probes for measuring gene expression in a sample derifrom human breast and BT 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       30-JUN-2000;

The single exon nucleic acid probe in a predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention.

                                The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart. The present sequence is one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular systems, cardiovascular disease, hypertension, cardiac arrhythmias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2090
Note: The sequence data for this patent did not specification, but was obtained in electronic for at ftp.wipo.int/pub/published_pct_sequences.

They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is one of the probes of the

They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is one of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer.

Note: The sequence data for this patent did not form part of the print specification, but was obtained in electronic format directly from WIPS of the cervix as obtained in electronic format directly from WIPS of the cervix as obtained in electronic format directly from WIPS of the cervix as obtained in electronic format directly from WIPS of the cervix as obtained in electronic format directly from WIPS of the cervix as obtained in electronic format directly from WIPS of the cervix as obtained in electronic format directly from WIPS of the cervix as obtained in electronic format directly from WIPS of the cervix as obtained in electronic format directly from WIPS of the cervix as obtained in electronic format directly from WIPS of the cervix as obtained in electronic format directly from WIPS of the cervix as obtained in electronic format directly from WIPS of the cervix as obtained in electronic format directly from WIPS of the cervix as obtained in electronic format directly from WIPS of the cervix as obtained in electronic format directly from WIPS of the cervix as obtained in electronic format directly from WIPS of the cervix as obtained in electronic format directly from WIPS of the cervix as obtained in electronic format directly from WIPS of the cervix as obtained in electronic format directly from WIPS of the cervix as obtained in electronic format directly from WIPS of the cervix as obtained in electronic format directly from WIPS of the cervix as obtained in electronic format directly from WIPS of the cervix as obtained in electronic f

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microcarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       analyzing

                                                                                                                                                                                                                                                                                                                                                                The present invention relates to novel single exon nucleic acid probes. The present sequence is one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the prob hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, staging, monitoring and prognosing diseases of the human breast, include; breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative breast disease and non-carcinoma tumours.
                                                                                                                                                                                                                                                                                                                    Note: The sequence data for this patent did not form specification, but was obtained in electronic format
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 25; SEQ ID No 5657; 322pp; English.
